

calcium

DESCRIPTION

Manvert Calcium is a liquid solution of complexed calcium.

FEATURES

Manvert Calcium can be used as calcium deficiency corrector or to make an extra addition of this element in order to improve the firmness and quality of the fruits, as it is an essential compound of the wall and membrane cell. Allows to obtain better quality fruits and more resistant to handling, prevents or stops the falling of flowers and fruits and enlarges the post harvest life of fruits and vegetables.

Manvert Calcium is especially suitable to prevent physiological disorders due to the lack of this element, such as: the blossom end rot of tomato, strawberry and watermelon, apple bitter pit, the black heart of the beet, turnip, celery, asparagus, legumes and fruit cracking.

CHIMICAL COMPOSITION

Calcium oxide (CaO) water soluble and complexed: 14,4% w/w (20,1% w/v)

Complexing Agent: Lignosulphonic Acid

APPLICATIONS ET USE RECOMMANDATIONS

Manvert Calcium can be applied both by foliar application or through irrigation system and in all kind of crops.

Manvert Calcium should be applied during the fruit formation and development stages.

General rate

Foliar application: 300-500 cc/hl

Drip irrigation application: 10-15 l/ha during all the cycle.

REMARKS

Manvert Calcium is compatible with the most commonly used pesticides of PHYTOGRAINES, except those of alkaline reaction products.

Manvert Calcium does not block filters and nozzles, leaving no sediment and for its special formulation allows reduce the water spray pH, improving the treatment efficacy in case of water pH above 7.
